

Sample Kite- Design 1

Materials

- A piece of paper
- A piece of string, about 2 to 4 meters long
- Tape
- Stapler
- Optional: Ribbon, about 1 meter

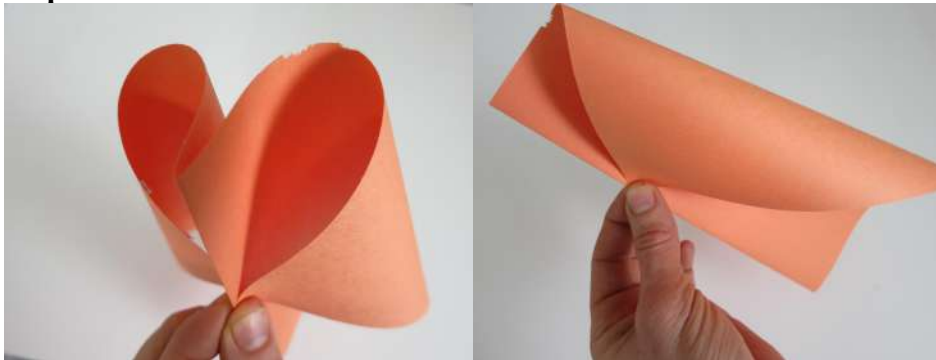

Steps

1. Fold the paper in half (bring short sides together)
2. Lift one corner and bring it down to the edge that you folded
 - Exact location along the crease is not important. We suggest about 5 cm from the end of the paper
 - Do NOT crease the paper – you want it to make a tube that the air can blow through
 - Hold on to the corner. Don't attach yet.
3. Fold the second corner down, staple together.
 - Bring it together with the first corner you folded down, then staple.
4. Make the hole and attach string
 - Pick a spot for your hole somewhere between the folded corners and the end of the paper.
 - Re-enforce that spot with tape on both sides of the crease.
 - Use your hole punch to make a hole through the tape and paper.
 - Attach string.
5. Tape ribbon to the tail of the kite.
6. Go fly a kite!

Reference Images

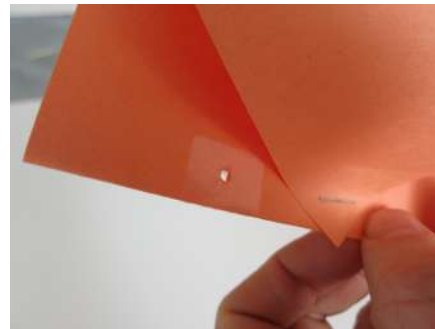

Step 1- fold

Steps 2 and 3 – bending corners down

Staple!

Step 4 – make a hole

Ready to fly – just add the ribbon tail!
