Pictured Below: We used chart paper and a marker to measure out 15cm squares. The grid can be as big or as small as you'd like. The bigger the grid, the more directional cards you will need. Place the picture cards on the outside grid of the mat. Select a starting point and place the "Go" card beside the selected card. Place the *Bee-Bot* on the "Go" card to begin.

Pictured below: We placed the directional cards on the mat to plan our path for the *Bee-Bot*. We were matching the bat to its habitat, a cave. We created this path through trial and error. This was the final result.
