More People Have Cell Phones Than Toilets, U.N. Study Shows

Out of the world's estimated 7 billion people, 6 billion have access to mobile phones. Only 4.5 billion have access to working toilets

On the eve of World Water Day last week, the U.N. offered a sobering statistic: according to its recent study, more people on earth have access to cell phones than toilets.

Out of the world's estimated 7 billion people, 6 billion have access to mobile phones. Far fewer — only 4.5 billion people — have access to working toilets. Of the 2.5 billion who don't have proper sanitation, 1.1 billion defecate in the open, according to the study.

There are officially more mobile devices than people in the world

The world is home to 7.2 billion gadgets, and they're multiplying five times faster than we are

"The great advantage [the telephone] possesses over every other form of electrical apparatus consists in the fact that it requires no skill to operate the instrument."

~Alexander Graham Bell, 1878

Let's look at an 'electrical apparatus' that takes a lot more skill to use

The Telegraph

- Go to <http://www.history.com/topics/inventions/telegraph>
- Watch the video then read the article below. Use the article to answer the questions on your 'What's a Telegraph Anyway?' handout.

Morse Code

- Invented in 1836 by Samuel Morse, Joseph Henry, and Alfred Vail
- Letters represented by a combination of short and long pulses
